Ref Decision Win

DRAW or NEWS PAPER DECISION

Ref Decision Loss

If you choose to let the News Papers Decide, Roll 1d6, an even number is a win for the Red Corner. An odd number is a win for the Blue Corner

- 1 Roll on the Lifestyles and Pre-Fight Training to see if it affects how the Fighters enter the bout and make adjustments to Fighter's TR rating
- 2 Next you need to find the adjusted KO rating for both Fighters. Add the PP of one Fighter to the CHIN rating of his/her opponent and divide by 2 (round up if the total includes a half number). Do this with the second Fighter also. These numbers are the ADJUSTED KO numbers that you will use to start the Quick Play game. (IE: Fighter A has a PP rating of "6" and his opponent has a CHIN Rating of "2". Add "6" + "2" = "8". Divide by 2 = "4" . "4" is Fighter A's ADJUSTED KO rating). Do the same for Fighter B.
- 3 Roll 2 d6 for the Fighter with the highest ADJUSTED KO Rating first. If the roll total is equal or less than the Adjusted Rating the Fighter gets a KO!
If the first Fighter does not get a KO, Roll 2 d6 for the second Fighter. If the roll total is equal to or less than the ADJUSTED KO rating It's a KO!
If a KO results, go to the Time and Round KO Charts
- 4 If neither Fighter gets a KO, you need to roll to see who wins the fight by decision. For each Fighter add their TR and POP ratings together (TR+POP). (IE: Fighter A has TR of "6" and a POP of "5". His total is "11". If Fighter B has a TR of "8" and POP of "8" his total is 16. Fighter B has a "5" difference. With a "5" difference and let's say the bout was scheduled for 10 rounds, you will find the column (3-5) Diff and under round 8 and roll 2 d6 to see how many Rounds Fighter B won.
If there is a "0" difference, Roll for the RED corner.
